POINT OF DISCHARGE: \_\_\_\_\_

TYPE OF DISCHARGE: \_\_\_\_\_

**RULES AND REGULATIONS COVERING DISCHARGE INTO SYSTEM**

Applicant or user must have a copy of the permit in their possession at all times when discharging into sewer system. Applicant and user agree to abide by NTPUD and T-TSA ordinances, rules and regulations pertaining to the use of the sewer system. The applicant will accept liability for damage(s) to sewer system facilities, violation of regulatory agency rules, regulations and actions caused by their negligence or failure to abide by District ordinances, rules and regulations. No person shall discharge water or any substance into District sewer system without complying with the following:

1. Applicant shall make application and obtain a permit from T-TSA and NTPUD. Applicant shall post deposits in the form of cash, check, money order or letter of credit in the prescribed amounts, payable to the respective agency, at the time of application. The deposit shall be refunded or applied to fees due, upon completion of use, and after determination of the discharge volume in accordance with the calculation sheet, Exhibit A.

2. No discharge shall take place until the District Inspector has approved all equipment at the site.
3. Discharge must be accomplished by equipment to prevent the introduction of solids, sediment or constituents in violation of this permit from entering the sewer system and designed to work properly at the maximum discharge allowed. Applicant or user shall not exceed the maximum discharge per cubic feet (gallons per minute) to be determined at the time of application and issuance of permit.
4. Applicant or user shall notify District twenty-four (24) hours in advance, immediately prior to discharge.
5. Discharge into the District's sewer system shall be solely at the discretion of the District and may be terminated at any time.
6. Within one month of the completion of a project that is less than three months in duration, the discharger shall provide the District with the volume, in gallons, discharged into the sewer system. Projects exceeding this time frame will provide this data in a quarterly statement or report, whichever is required.
7. Deposits of \$100 to NTPUD and \$100 to T-TSA are required before beginning projects which are anticipated to involve a total volume of less than 250,000 gallons. If the discharged volume is expected to be 250,000 gallons or greater, the deposit is increased to \$500 for NTPUD and \$1000 for T-TSA.
8. The discharger shall pay the NTPUD at the rate of \$2/per thousand gallons, with a minimum charge of \$100. Payment is due within 30 days of receipt of a NTPUD invoice.
9. The discharger shall pay the T-TSA at the rate of \$5/per thousand gallons, with a minimum charge of \$100. Payment is due within 30 days of receipt of a T-TSA invoice.
10. The discharger will comply with all special conditions imposed on this permit and those included in the T-TSA Pretreatment Ordinance 3-89, when applicable.
11. In addition to NTPUD and T-TSA ordinances there shall be no discharge of the following materials without receiving special permission to discharge:  
Poisonous solids, liquids, gases, gasoline, benzene, naphtha, fuel, oil, ash, cinder, sand, mud, rock, straw, metal, glass, rags, feather, tar, plastic wood, paunch manure, waters or wastes containing iron, chromium, copper, zinc, radioactive materials, any unusual BOD, chemical oxygen demand or chlorine requirements in such quantities as to constitute a significant load on District sewer system, or other flammable, explosive liquids, or solids, or gas, or other solid or viscous substance which could obstruct the sewer flow, or any water or waste having a pH lower than 5.5 or higher than 9.0.

**SPECIAL PERMISSION TO DISCHARGE**

In the event that a discharger proposes to discharge wastewater into the system which contains any of the constituents prohibited in #11 above, or exceeding the preliminary discharge guidelines, the discharger must receive approval from NTPUD and T-TSA for discharge after each specific constituent and its strength are identified through an approved laboratory analysis program. Pretreatment may be required by either agency prior to commencement of such a discharge.

**SPECIAL NTPUD IMPOSED CONDITIONS OF DISCHARGE COVERED BY THIS PERMIT:**

1. The discharger shall comply with requirements set forth by NTPUD, T-TSA, and other applicable regulatory agencies.
2. The wastewater entering the sewer system will adhere to the attached discharge guidelines.
3. Petroleum contaminated waste waters that do not initially comply with guidelines will undergo carbon or equivalent polishing prior to discharge.
4. Petroleum contaminated waste waters will be analyzed for those constituents, listed on the guidelines, that are petroleum pollution related. The results will be submitted to District for evaluation prior to discharge approval.
5. A quarterly report will be submitted which includes, but is not restricted to a site plan, totalizer flow reading, and appropriate quarterly chemical analyses.
6. There will be a product sample site available for random sampling by NTPUD.

**GENERAL NATURE OF PROPOSED DISCHARGE:**
